SEFTIM is a French based international engineering company 50 years old working exclusively in the field of lightning protection and Electro-Magnetic Compatibility.

Our Lightning risk protection and prevention methods are based on internationally recognized standards. Our activities include: Lightning Risk Assessment, Safety Management, Technical Studies (Lightning Protection Systems, Surge Protective Devices, Earthing/grounding and Equipotential bonding), Inspection-Tests and Maintenance as well as Site Surveys and dedicated Trainings.

SEFTIM experience is related to various fields as for example: Nuclear Facilities, Data Center, Explosive Storage, Petrochemical industries, Renewable Energy, Railway Facilities, Antennas Lightning Protection and EMC, Lightning Earthing, etc. Specific leaflets for each of these fields can be downloaded from our web site at [www.SEFTIM.com](http://www.SEFTIM.com).

For Nuclear sites we have developed specific risk methods that are also including the extreme meteorological conditions.

SEFTIM is independent from lightning protection equipment manufacturers: the result of our studies is what you need. We have a deep knowledge of the up-to-date international standards to optimize and reduce the cost of protection due to participation to many committees including chairmanship of some of them. We have an R&D activity with international scientific publications to understand the trends and mastering up-to-date lightning protection. We also carry out a lot of trainings and technology transfer. Our free of charge help desk is available for technical questions.
